GEHL News:

The new Gehl SL5240 – Powerful, Speedy and Reliable

In summer 2008 Gehl will introduce a new Skid Steer Loader model, the SL5240. This is the successor model of the SL4840 that was running successfully over a lot of years.

Key features of this new Gehl model are a clearly improved loading height and reach from pivot as well as an especially powerful 4 cylinder Deutz Diesel engine. The turbo version has a power output of 47 kW respectively 62 HP at 2.500 rpm.

Further important sales arguments and advantages against competition are enhanced operator's comfort and safety.

The spacious ROPS/FOPS protective cabin complies with Level II safety standards and offers ample floor space also to tall machine operators. The cabin is completely glazed and in addition equipped with sliding side windows, an extreme large rear window which serves as an emergency exit and extra large handles for an easy access. The large covered openings in the cabin roof offers added visibility with the loading boom in the fully raised position. More features are: a slip-free step, dual front and rear halogen work lights and dual tail lights. The completely tiltable cabin and the large swing-open rear door fully expose maintenance access points to the engine compartment. The outstanding novelty is the especially direct accessible and easy to remove engine oil filter in the rear compartment.

Always unmatched is the hydraulic capacity of Gehl Skid Steer Loaders. This is also true for the SL5240. Exceptional hydraulic power provides a

pressure of 172 bar and a flow of 114 l/min to allow high break out forces and outstanding attachment performance.

The unique Gehl T-Bar/Joystick control offers as standard feature proportional auxiliary control and allows operator-controlled speed and movement of the attachment. This is especially of advantage when the machine and a hydraulic operating attachment is working with different rates to reach highest performance.

Highlight of the new SL5240 is the high speed up to 13,5 km/h which is the fastest in this class and counts to the top of the world.

Gehl Skid Steer Loaders gives users the edge in productivity and profitability.
