GEHL News: GEHLMAX Tracked Dumper RD 7

GEHL Europe GmbH, Neuenkirchen, distributes for several years now its own range of tracked dumpers. Under the name of GEHLMAX the dumpers RD 6 up to RD 15 come with operating capacities between 350 kg and 1,550 kg. All four models offer hydrostatic drive. This spring GEHL introduced the fifth model – the RD 7.

The standard version of the GEHLMAX RD 7 convinces with an operating capacity of 500 kg and measures 1,680 mm in length. Operators may get through every garden entry due to the dumpers width of only 830 mm.

The tracked undercarriage with hydrostatic transmission is fitted with a modular chassis to mount various attachments. Due to this, the GEHLMAX RD 7 finds its use in many different applications. In addition, an optional self-loading bucket increases the versatility of this GEHLMAX dumper. The wide angle and the round design of the loading skip ensures for easy and quick discharge. An optional auxiliary hydraulic enables for the use of different hydraulically driven attachments.

The air cooled 7,4 kW/ 10 PS YANMAR Diesel engine with electrical starter delivers sufficient power for safe and easy working in gradients of up to 17°. In its standard version the 2-Speed transmission is controlled through one manual lever.

The introduction of its line of small and medium-sized tracked dumpers two years ago has become another stronghold. Thus, GEHL has become a prominent full-range supplier for compact building machines, particularly for use in gardening and landscaping.
